PROPOSED PLANTING

The planting features cycads, Podocarpus, and Banksia. These have been chosen for their durability, low maintenance, and ability to provide texture and structure while connecting to the natural environment.

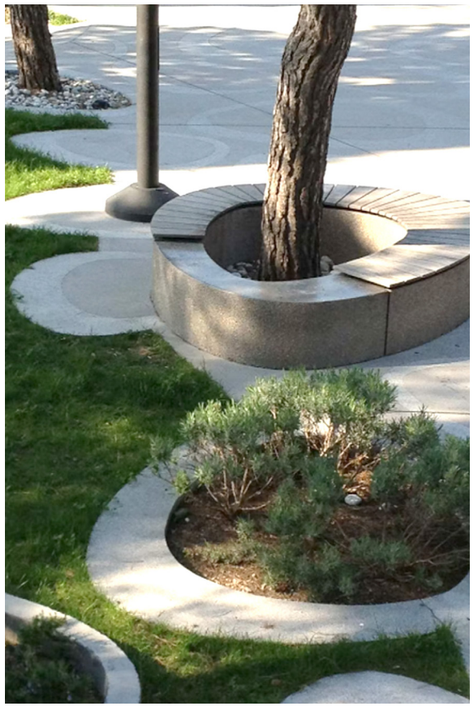

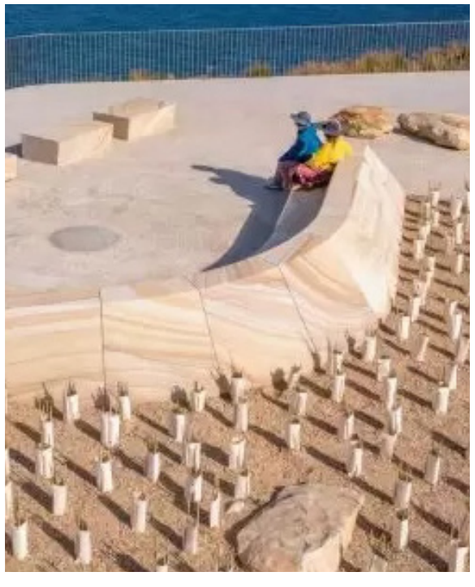

SEATING

A strategy of seamless integration with the surroundings, harmoniously blending form and function. The curved shapes, echoing the contours of the planting beds, create spaces for contemplation and pause, transforming the area from a mere thoroughfare into a place of connection and reflection.

LIGHTING

An integrated lighting design strategy that not only illuminates and defines the built form but also serves as a playful and sculptural element, enhancing the space with both function and visual intrigue.

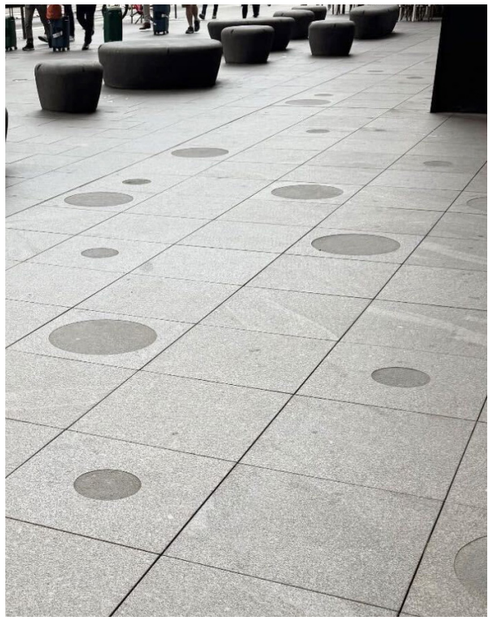

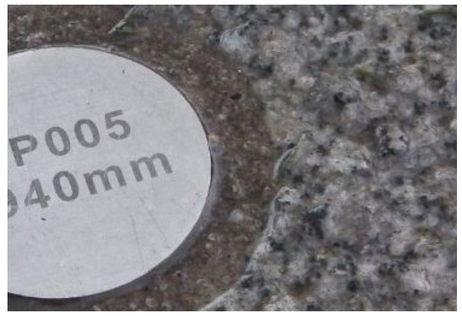

SURFACE TREATMENT

High-quality bluestone references a history and uplifts an otherwise vehicle prioritised surface material. This is meaningful placemaking and creates a sense of space. Carefully selected patterns and textures enhance the flow and transition of pedestrian pathways. The application of bluestone references the site's heritage and integrates seamlessly with the existing fabric, referencing the iconic bluestone laneways of the local area.
